SKILL ENHANCEMENT COURSE:IV	17SEUCS4	SOFTWARE TESTING - PRACTICAL	-	24	2

Subject Description: This course provides an opportunity to develop testing skills and to learn different kinds of testing.

Goal: To enable the students to equip them with testing the software after development phase.

Objectives: On successful completion of the course the students will understand the concept of software testing and expertise in using testing in software.

Write at least 10 TEST CASES for the following programs. Test cases can be for Input data, Conditional expressions, control transfer, output, etc. Run-Test-Debug-until all the test cases are in success status. Marks distribution as follows:

1. List of Test Descriptions (at least 10) for the Program. (20%)
2. Test Cases (40%)
3. Program with all test case results success (30%)
4. Record (10%)

TEST CASE EXAMPLE:

Test-Id	Test Description	Test Steps	Expected Output	Actual Output	Status
TC-01	Acceptance of 10 digit input data	Input 10 Digit Number	Accepting 10 digit number	Accepted 10 digit number	Success
TC-02	Non-acceptance of character data	Input a character data X	Character X should not be accepted	Accepting Character data	Failure

TC-02	Non-acceptance of character data	Input a character data X	Character X should not be accepted	Character data not accepted	Success
TC-03	Digit sum of 10 digit is in single digit	Output data	Single digit sum	Single digit Sum	Success

1. Test the C program: Finding the sum of individual digits of a 10-digit number until a single digit is produced.
2. Test the C Program: Accept the inputs student name, marks in five subjects and declare the result as PASS if the student gets minimum 40 in each subject; otherwise declare the result as FAIL.
3. Test the C program: Accept two numbers from the user find the biggest and smallest.
4. Test the C program: Sort and store the elements of two arrays of integers into the third list.
5. Test the C program: Experiment the operations of a stack using array implementation.
6. Test the C program: Menu-driven option for queue operations like add, remove and display.
7. Test the C++ program: Palindrome string checking program (using pointers).
8. Test the C++ program: Generate Fibonacci series and check it.

Part III - COMPREHENSION IN COMPUTER SCIENCE (Courses III, IV,V & VI)

(For those admitted in June 2017-18 & onwards)

The Comprehension in Computer Science examination will be conducted at the end of each semester III, IV, V, VI for a maximum of 50 marks which consists of

Comprehension (Multiple Choice Questions) (50x1=50) 50 marks

The students are examine on Core, Core Allied, Core Elective papers studied in III, IV, V & VI Semester. In the comprehension component, the students are tested on their grasping ability of the subjects of study.

Extension Activity:

Participation of a student in the extension activities conducted by the department between I and VI semesters evaluated under Part :V is mandatory for completion of the programme.
